

Fibresand takes tropical racing by storm

When Singapore Turf Club wanted to bring all weather racing to Asia their attention turned to Europe where Fibresand was already a huge success.

"Fibresand has been a revelation for horse racing in Singapore and will play a big part in our future progress".
Mr Lau Kian Heng
Vice President (Operations)

In 1998 Singapore Turf Club embarked on a program to create one of the best racetrack facilities in the world, which would include all the latest technologies available.

As Asia's first all weather racing venue Fibresand's proven track record and performance properties together with professional on-site production and after sales support made it the obvious choice for the new Kranji installation.

The 37,500 m² track allows the trainers to work horses in inclement weather and also allows the Club to carry on racing throughout the monsoon season.

The sure footing provided by Fibresand and the innovative banked design is a winner with the trainers and jockeys based at the track.

Since the track opened in 2000 Fibresand remains a firm favourite with the Turf Club management and maintenance team and a further S\$1.25 million is expected to be invested in expanding the use of Fibresand at the track in the future.

Fibreturf: a naturally synthetic grass riding surface for professionals

"Fibresand provides an excellent cushioning effect for the horses".

Michael Clements, Trainer

Fibresand and its sister product Fibreturf combine the latest technology and natural materials to provide a choice of pure sand or turf reinforced riding surfaces. Both surfaces have been designed to obtain greater use out of an arena, gallop or racetrack throughout the year whilst maintaining the high quality of surface demanded by today's horse and jockey.

Fibresand is ideal for tropical climates which need all year availability in any weather. Due to its improved drainage rate and ability to withstand repeated applications of salt Fibresand can equally cope with the heaviest of rain storms and the coldest of winters.

Fibreturf is the obvious choice for those preferring the aesthetic qualities of a natural grass surface and who wish to enjoy all the advantages of the Fibresand fibre reinforcement technology.

Whichever surface is chosen, Fibresand International can quickly produce and install a superior all weather racing surface anywhere in the world.
